COLOUR STABILITY

ELASTOMER MODIFIED BITUMINOUS EMULSIONS

The following applies to the following Liquid Rubber products:

- CreteSafe B-150
- SealRoof B-200
- CreteSafe B-250
- HighBuild S-200
- TrowelGrade B-400

The above products when first applied and prior to curing will be a dark brown colour. Once the product is cured the product is a black colour. This black colour lasts through the life of the product, which is 30 years under nominal weather and environmental conditions

Extended weathering of the cured membrane, over 20 years, can produce a 'spider web' pattern of thin white lines. These lines are not cracks that penetrate the membrane nor do they affect the waterproofing performance of the product. This pattern can be easily removed by wiping down the surface with commercially available mineral spirits, returning the coating to its original black colour.

Further information can be obtained by contacting the Liquid Rubber Technical Service department at the address below.
